HOW TO RESPOND TO AN OPIOID OVERDOSE

Signs of an overdose include:

- can't be woken up
- slow or no breathing
- fingernails or lips turning blue

1. Call 9-1-1

- tell them someone isn't breathing
- give an accurate description of your location

2. Give naloxone

3. Perform rescue breathing

- tilt head back
- pinch nose
- seal your mouth over theirs
- give 1 breath every 5 seconds
- keep going until help arrives or they start breathing on their own

4. Stay until help arrives

- if you have to leave, roll the person on their side
- don't let the person take any more drugs

DON'T BE AFRAID TO CALL 9-1-1!

Rhode Island has a Good Samaritan Law.

Callers to 911 and overdose victims are protected from prosecution if drugs are found at the scene.

SAVE A LIFE. GET NALOXONE.

Naloxone is an antidote used to reverse a drug overdose from heroin or prescription pain medications.

Naloxone is available without a prescription at pharmacies across Rhode Island.

Most insurers cover the cost of naloxone.

HOW TO PREVENT AN OVERDOSE

- ▶ Don't use alone (pair up for safety).
- ▶ Teach friends and family how to respond to an overdose and to carry naloxone.
- ▶ Don't mix drugs like benzos, alcohol, heroin, or pain pills.
- ▶ Not taking drugs for a while lowers your tolerance level. If you must restart, start low and go slow.
- ▶ Fentanyl is being found in heroin and cocaine. You can't see or sense it until it is too late.
- ▶ Get into treatment today and begin building positive recovery support.
- ▶ Most importantly, stay in recovery. It works.

Naloxone treats the symptoms. Recovery treats the problem.
