HOW TO RESPOND TO AN OPIOID OVERDOSE

**Signs of an overdose include:**
- can’t be woken up
- slow or no breathing
- fingernails or lips turning blue

1. **Call 9-1-1**
   - tell them someone isn’t breathing
   - give an accurate description of your location

2. **Give naloxone**

3. **Perform rescue breathing**
   - tilt head back
   - pinch nose
   - seal your mouth over theirs
   - give 1 breath every 5 seconds
   - keep going until help arrives or they start breathing on their own

4. **Stay until help arrives**
   - if you have to leave, roll the person on their side
   - don’t let the person take any more drugs

DON’T BE AFRAID TO CALL 9-1-1!

**Rhode Island has a Good Samaritan Law.**

Callers to 911 and overdose victims are protected from prosecution if drugs are found at the scene.

SAVE A LIFE. GET NALOXONE.

Naloxone is an antidote used to reverse a drug overdose from heroin or prescription pain medications.

Naloxone is available without a prescription at pharmacies across Rhode Island.

Most insurers cover the cost of naloxone.

HOW TO PREVENT AN OVERDOSE

- Don’t use alone (pair up for safety).
- Teach friends and family how to respond to an overdose and to carry naloxone.
- Don’t mix drugs like benzos, alcohol, heroin, or pain pills.
- Not taking drugs for a while lowers your tolerance level. If you must restart, start low and go slow.
- Fentanyl is being found in heroin and cocaine. You can’t see or sense it until it is too late.
- Get into treatment today and begin building positive recovery support.
- Most importantly, stay in recovery. It works.

Naloxone treats the symptoms. Recovery treats the problem.
