HOW TO RESPOND TO AN OPIOID OVERDOSE

Signs of an overdose include:
• can’t be woken up
• slow or no breathing
• fingernails or lips turning blue

1. Call 9-1-1
   • tell them someone isn’t breathing
   • give an accurate description of your location

2. Give naloxone

3. Perform rescue breathing
   • tilt head back
   • pinch nose
   • seal your mouth over theirs
   • give 1 breath every 5 seconds
   • keep going until help arrives or they start breathing on their own

4. Stay until help arrives
   • if you have to leave, roll the person on their side
   • don’t let the person take any more drugs

DON’T BE AFRAID TO CALL 9-1-1!

Rhode Island has a Good Samaritan Law.

Callers to 911 and overdose victims are protected from prosecution if drugs are found at the scene.

SAVE A LIFE. GET NALOXONE.

Naloxone is an antidote used to reverse a drug overdose from heroin or prescription pain medications.

Naloxone is available without a prescription at pharmacies across Rhode Island.

Most insurers cover the cost of naloxone.

HOW TO PREVENT AN OVERDOSE

► Don’t use alone (pair up for safety).
► Teach friends and family how to respond to an overdose and to carry naloxone.
► Don’t mix drugs like benzos, alcohol, heroin, or pain pills.
► Not taking drugs for a while lowers your tolerance level. If you must restart, start low and go slow.
► Fentanyl is being found in heroin and cocaine. You can’t see or sense it until it is too late.
► Get into treatment today and begin building positive recovery support.
► Most importantly, stay in recovery. It works.

Naloxone treats the symptoms. Recovery treats the problem.
